Summary of Public Comments
Land and Shoreline Management Plan
The Central Nebraska Public Power and Irrigation District

Input from Public Informational Meetings:

- August 3, 1999 in Lexington
- August 4, 1999 in Gothenburg
- August 5, 1999 at Lake Ogallala's Eagle Viewing Center

BACKGROUND INFORMATION:

Three meetings were advertised and held by The Central Nebraska Public Power and Irrigation District (Central) to inform the public, recreators, and area homeowners and leaseholders of the Land and Shoreline Management Plan (Management Plan) process required by Central's Federal Energy Regulatory Commission (FERC) License. At each meeting, a formal presentation was made by the consulting firm of Duke Engineering & Services (DE&S), explaining why Central is developing the Management Plan, what the Management Plan will include, and how the planning process for development of the Management Plan will be conducted. The presentation also included information on the opportunities that Central is providing to the public to solicit input into the Management Plan process.

The FERC License Article that requires Central to prepare a Management Plan also requires Central to consult with the Nebraska Game and Parks Commission and the United States Fish and Wildlife Service as a part of the process. The license article does not require public input. However, Central believes that the Management Plan will best address the public's and Central's needs if public input and involvement are solicited. Therefore, Central has developed a public input process that involves three steps. The first step was the three meetings Central held in August, as listed above. At those meetings, after the formal presentation, attendees were asked to volunteer any thoughts, ideas, opportunities, or other items about the lakes and shorelines that they might have on their minds. The input received by Central from those meetings is outlined below.

The second step is a second series of meetings to be held in January of 2000. At these meetings a draft land use map of the land and shoreline around the lakes will be presented. Central and DE&S are developing a list of opportunities, concerns, and questions for the public to comment on at this set of meetings. The third step will be the formal presentation of the Management Plan to the public at a series of three Public Informational Meetings in May of 2000. After the formal presentation, Central again will solicit ideas, comments, and suggestions. Attendees also will have the opportunity to provide written comments on the Management Plan, if they prefer.

SUMMARY OF PUBLIC COMMENTS

This document is the compilation of input received from the attendees at each of the three meetings that Central held in August. Some of the issues brought up during the discussion apply to Central's entire Project, while others relate specifically to an individual lake. Those topics with project-wide significance are listed in the first section, followed by the lake specific items.

Project Wide Items Raised

- ❖ Erosion & Shoreline Stabilization - these two items were mentioned at all three meetings and as these subjects are interrelated are being presented as one category. The various items in this category include:
 - Erosion - Concern was expressed with erosion being caused by boat wakes and nature
 - Shoreline Stabilization
 - Concern about appearance - consistency and upkeep of structures and erosion control materials
 - Concern about the impact of repair or installation of shoreline stabilization improvements that impact the adjacent property or leaseholders shoreline
 - Concern about the often lengthy time frame involved in obtaining 404 Permits

- ❖ Boating Safety
 - Expressed the need for increased enforcement of existing boating laws
 - Concern with jet skiers coming too close to the shoreline, docks, and other boats
 - Concern with boaters, especially jet skis operators, not obeying the "rules of the water"

- ❖ Recreational Access
 - Grandfather existing uses and facilities
 - Individual Docks, Boat Stations
 - Length or placement of docks and stations - especially in areas experiencing sedimentation
 - Construction regulations (maintenance, consistency & safety)
 - Public Access to Shoreline
 - Public Use of areas between water and property owner or leaseholder home
 - Commercial and/or Marina Access
 - Maintenance of areas leased by NGPC (boat ramps & picnic areas)
 - Fishing Access
 - Continue to provide access for bank fishing
 - Hunting Access
 - Continue to provide access for hunting (Note: See Johnson Lake below)

Johnson Lake & Plum Creek

- Suggestion of a hike and bike trail around Johnson Lake
- Concern with erosion of Johnson Lake's island
- Concern expressed with impacts of sedimentation
- Safety due to length of docks in shallow areas
- Provision of fishing areas
- Concern with no wake zone in "channel" between Lake and Mallard Beach South Bay
- Suggestion of limiting use of jet skis near shoreline and only on certain days
- Concern about waterfowl hunting with concentrated shoreline development on Johnson Lake
- Suggestion of longer notice for when the lakes may be drawn down so adjacent property owners or leaseholders can do repair work to shoreline area
- Concern raised about public vs. private use of "association" boat ramps

Jeffrey Reservoir/Midway Lakes

- Suggested an additional boat ramp at Midway, provide additional access to lake
- Rebuild road around NGPC boat access area cove for fishing access
- Sedimentation at inlet area of Jeffrey Reservoir and overall concern about impacts of sedimentation
- Continue policy of "no additional development" along the west side of Jeffrey Reservoir
- Suggestion that notice of when the lakes may be down so adjacent property owners or leaseholders can do repair work to shoreline area
- Suggestion that Central budget dollars in their annual budget to assist local leaseholders in their erosion control efforts being conducted throughout Jeffrey Reservoir
- Suggestion that leaseholders be given ability and/or assistance to bring in a barge to do repairs on shoreline and seawalls

Lake McConaughy

- Preservation of historical sites and trails
- Consider National Historic Preservation Act strategies
- Concern with protecting private property rights while ensuring public access to water
- Concern about continued public access to south side of Lake McConaughy that may be impacted by subdivision and golf course development pressures in that area
- Concern about potential development pressures with marinas and other structures placed in the lake could impact safety and access to lake waters for public recreation
